WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Bar 60 long x 32 wide x 92 tall, ends square.

Each 60 x 32 face: two M16 holes, drill 14, tap 24 deep, at 15 and 45 mm from the back end, on the width centre.

Two screws in each plate stop the bar turning when the carrier hits it at full pump pressure.

Check: the back end is square to the faces (the carrier lands on it).
